

InSight Anesthesia

It's no secret: When it comes to delivering anesthesia care, vigilance is tantamount.

With an anesthesia information system silently working for you, vigilance actually improves as a result of the automatic charting of your patients' critical data in conjunction with a decision support system that helps the anesthesiologist respond to changes in patient information.

InSight Anesthesia™ is a decision support system that works with Picis Anesthesia Manager, part of the CareSuite® family of high-acuity solutions, enabling the creation of rules based on clinician-defined criteria. For example, an anesthesiologist is caring for patients concurrently in ORs 1 and 4 and wants to know when a patient's information changes. With InSight Anesthesia, a rule can be created to notify the anesthesiologist of changes in specified information in the patient record such as heart rate, blood pressure and cardiac output. InSight Anesthesia delivers the information you need when you need it, and is completely configurable by you.

InSight Anesthesia was designed by clinicians, so creating each rule is intuitive. Rules are written using a natural language format and draw from fields within Anesthesia Manager, such as physiologic variables, fluid totals, lab results and patient demographics. With extensive documentation and comprehensive support, Picis is here to help get you up and running fast.

Always working. Completely configurable. Easy to use. Information you need when you need it. Make your anesthesia solution work harder for you. **InSight Anesthesia for Picis Anesthesia Manager.**

Configurable to meet your specific needs

Create your own rules using fields within Picis Anesthesia Manager

Facilitates notification of changes in clinical information

Specify under what circumstances you want to receive a notification, such as when physiologic data trends occur over a certain period of time and by age group

Helps support physician decisions

Receive timely notifications so you can respond appropriately

Assists research studies

Helps identify patients who are eligible for clinical trials, research studies or for hospital-based protocols

How can I be notified of changes in physiologic data?

InSight Anesthesia can notify you if key physiologic data deviate from previous or baseline values.

How can I be sure that I am delivering the best care to my pediatric and geriatric patients?

Use InSight Anesthesia to be notified when vital signs and other important physiologic data reach pre-defined age-dependant thresholds.

How can I be sure that I am maintaining the optimal fluid balance for my patients?

InSight Anesthesia can notify you if urine output information drops below pre-defined limits.

How can everyone in the OR be made aware of a potential patient situation?

Use InSight Anesthesia to notify all relevant clinicians and staff if patient information indicates a history of malignant hyperthermia and temperature increases above normal.

Contact your Picis representative today to discuss how InSight Anesthesia can help your anesthesia department.

About Picis

Picis is a global provider of innovative information solutions that enable rapid and sustained delivery of clinical, financial and operational results in the acute care areas of the hospital. These high-acuity areas include the emergency department, operating and recovery rooms, and intensive care units. Picis offers the most advanced suite of integrated products focused on these life-critical areas of the hospital where the patients are the most vulnerable, the care process is the most complex and an increasing majority of hospital costs and potential revenue are concentrated. Headquartered in Wakefield, Massachusetts, Picis has licensed systems for use in more than 1,700 hospitals in 19 countries. More information is available at www.picis.com.
