

TouchPoint ED

Where **interface management** and **easy connect**

Getting IT systems to talk to one another is an essential, and often challenging, part of creating an automated clinical environment.

As systems evolve, maintaining, auditing and updating interfaces are ongoing efforts that require resources, coordination, and absolute precision to ensure that data integrity is maintained. TouchPoint ED™ is a graphical tool that enables administrators to easily view, manage and update interface field mapping. It also enables administrators to clearly view and search interface logs for reporting purposes. And it comes free of charge with the ED PulseCheck application.

Take control of your interfaces with TouchPoint ED.

Graphical, user-friendly interface management

- Reduce IT development and maintenance costs
- Go live faster with intuitive interface mapping and testing tools
- Interface mapping and specifications “dashboard”
- Interface testing and troubleshooting made easy
- Easily adapt interfaces as systems change
- Accessible from anywhere

Where interface management and easy connect

Discover how easy interface management can be with TouchPoint ED

Reduce IT development and maintenance costs

Reduce reliance on technical resources for interface management with TouchPoint ED. Changes to HL7 mapping no longer need to be coded in the facility interface engine; these changes can be made simply by a system administrator.

Go live faster

With user interfaces that allow data mapping, HL7 verification and log querying and drilldowns, your interfaces can be configured and tested in no time, ensuring that your ED PulseCheck implementation remains on schedule.

Interface mapping and specifications “dashboard”

Understand each component of your interfaces, right down to the components of each HL7 message. Configure and change any time, with all changes available to all users immediately.

Interface testing and troubleshooting made easy

Interface logs are reportable, searchable and users can drill down into individual data exchange attempts for unparalleled access to interface transactions.

Easily adapt interfaces as systems change

Make the appropriate modifications to reflect new or changed data being passed to ED PulseCheck as third-party systems are updated.

Accessible from anywhere

Because it is part of the Web-native ED PulseCheck, TouchPoint ED can be accessed securely from any computer or device connected to the Internet.

Delivering Results in Emergency Care

TouchPoint ED is currently only available to new ED PulseCheck clients and is currently only available for inbound interfaces. Please contact your Picis representative for more details.

About Picis

Picis is an established provider of innovative healthcare information technology solutions designed to transform the delivery of patient care information in the high-acuity areas of the hospital, including the intensive care units, operating and recovery rooms, and emergency department. Picis offers the most advanced suite of integrated software and services focused on these life-critical areas of the hospital where the patients are the most vulnerable, the care process is the most complex and an increasing majority of hospital costs are incurred. Headquartered in Wakefield, Massachusetts, Picis has licensed systems for use in more than 1,300 hospitals in 19 countries. More information is available at www.picis.com.
