

Picis Prima

Freedom to Document. Anywhere Care Happens

Mobile Anesthesia Documentation for Modern Perioperative Care

Picis Prima enables anesthesia clinicians to document, review, and manage patient care directly from a tablet at the point of care. By extending documentation beyond the traditional workstation, Prima helps support workflow flexibility, more timely charting, and continuity across the perioperative patient record.

Mobile Documentation for Modern Anesthesia Care

Prima enables clinicians to access patient records, document care, review physiological information, and capture critical clinical data directly from a tablet throughout the surgical workflow.

Supports preoperative, intraoperative, and postoperative documentation workflows

Designed specifically for anesthesia clinicians and perioperative teams

Provides mobile access to patient information at the point of care

Helps reduce reliance on workstation-based charting

Key Features & Benefits

Workflow Flexibility

- Document from a tablet at the point of care
- Reduce dependence on fixed workstations
- Support mobile perioperative workflows

More Timely Documentation

- Capture information during patient care
- Reduce reliance on memory-based charting
- Improve documentation completeness

Connected Perioperative Record

- Support continuity across the patient journey
- Access information across perioperative workflows
- Maintain a comprehensive anesthesia record

Designed for Anesthesia

- Built specifically for anesthesia clinicians
- Supports preoperative and intraoperative workflows
- Aligns with established anesthesia documentation practices

Connected Medical Device Support

- Receive physiological information from connected devices
- Supports patient monitors, ventilators, and anesthesia machines
- Reduce manual transcription of device-generated data

EMR Integration

- HL7-based interoperability
- Supports connected perioperative workflows
- Maintains continuity across the patient record

Mobile Clinical Platform for Perioperative Care

- Tablet-based anesthesia documentation
- HL7 integration
- Connected medical device support
- Physiological data capture
- Preoperative assessments
- Intraoperative documentation
- Clinical notes and assessments
- Mobile workflow support

FAQ

What is Prima?

Prima is a mobile anesthesia documentation platform designed to support perioperative workflows from preoperative assessment through postoperative care.

Who is Prima designed for?

Prima is designed for anesthesiologists, anesthesia clinicians, perioperative departments, and surgical services teams.

What problem does Prima solve?

Prima enables clinicians to document care directly from a tablet, reducing reliance on fixed workstations while supporting workflow flexibility and documentation continuity.

Can Prima receive information from connected medical devices?

Yes. Prima can receive physiological information from connected devices, including patient monitors, ventilators, and anesthesia machines, when integrated with the appropriate services.

Does Prima integrate with EMR systems?

Yes. Prima supports HL7 integration to facilitate interoperability with electronic medical record systems.

Mobile Documentation. Connected Workflows. Better Visibility.
